LOGO KEY

Identity system, construction, colour and usage rules · Version 1.0 · August 2026

Visual language derived from the Hivekeep open-source agent platform · github.com/MarlBurroW/hivekeep

Primary logo

GARZAHIVE

CONCEPT

The mark reduces a bee to pure hive geometry. The abdomen is a single hexagon sliced into four bands; the wings are two flat-top hexagons in outline. Nothing is illustrated — every edge is drawn from the same hexagonal grid the honeycomb is built on.

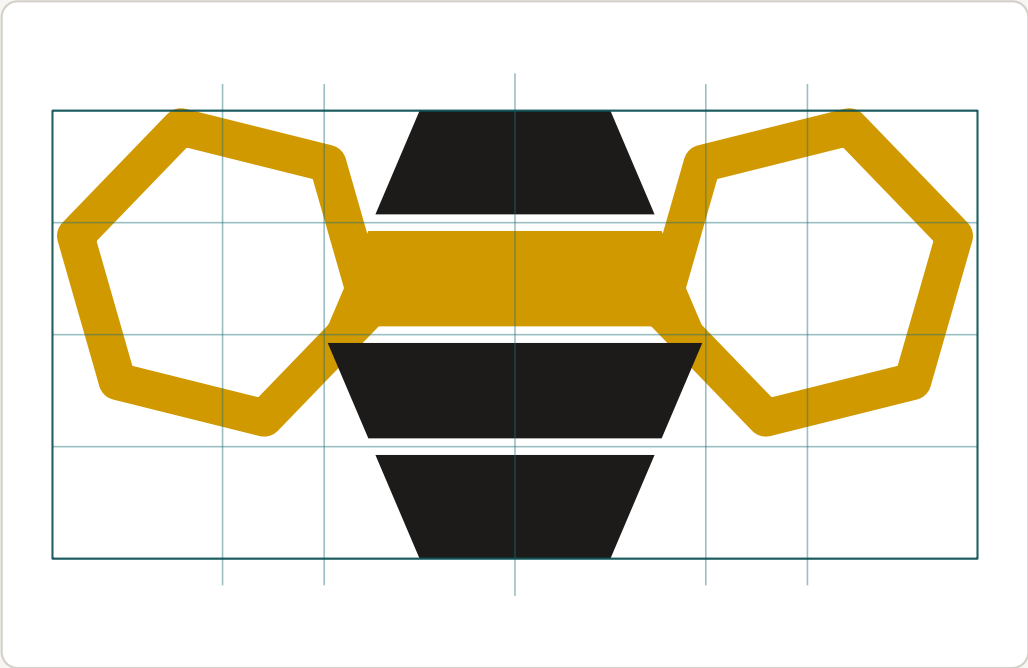

WHY IT FITS GARZAHIVE

Four bands read as four agents in one body — a household of specialists, not a single assistant. The wings are drawn as open outlines rather than solids: the platform is self-hosted and open, with nothing sealed off. Amber marks the one active cell, the signature the rest of the system inherits.

STONE

Warm, geometric, engineered. Consumer-approachable on the surface; precise underneath.

Construction

PROPORTIONS

Icon bounding box	2.065 : 1 (W : H)
Body hexagon	0.852 H wide × 1.000 H tall
Hexagon type	Flat top & bottom, pointed sides
Band pitch	H / 4 (four equal bands)
Band gap	0.037 H
Accent band	Band 2, counted from the top
Wing radius	0.338 H (flat-top hexagon)
Wing centre	± 0.653 H from axis, – 0.139 H
Wing rotation	14° outward, mirrored
Wing stroke	0.083 H, round joins

All values are expressed as multiples of H, the icon height, so the mark rebuilds cleanly at any size. Never redraw by eye — scale the supplied vector.

Clear space and minimum size

X = one band pitch = 1/4 of the icon height. Keep X clear on all four sides.

MINIMUM SIZE

Horizontal lockup	132 px	35 mm
Vertical lockup	104 px	28 mm
Icon only	24 px	7 mm
Favicon / 16 px	use single-colour icon	—
	SCREEN	PRINT

SCALE LADDER

Below 24 px the bands close up — switch to the single-colour icon.

Approved lockups

GARZAHIVE

Primary — vertical
Default. Square-ish placements.

GARZAHIVE

Primary — horizontal
Headers, nav bars, README banners.

GARZAHIVE

Reversed
On charcoal and photography.

GARZAHIVE

Mono — charcoal
One-colour print, engraving, fax-grade.

GARZAHIVE

Mono — white
Dark or busy backgrounds.

GARZAHIVE

Icon + wordmark, separated
Icon alone once the brand is established.

Palette

Hive Amber

HEX	#D19900
RGB	209 · 153 · 0
CMYK	0 · 27 · 100 · 18
PANTONE	7549 C (nearest match)

Accent only. The active cell, wings, rules and CTAs.

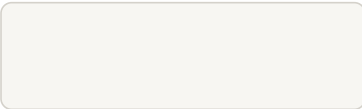

Hive Charcoal

HEX	#1C1B19
RGB	28 · 27 · 25
CMYK	0 · 4 · 11 · 89
PANTONE	Black 6 C (nearest match)

Body bands, wordmark, primary text.

SUPPORTING

Comb White

#F7F6F2 247 · 246 · 242

Backgrounds, reversed lockups

Deep Teal

#0C4E54 12 · 78 · 84

Secondary UI accent, links

Ink

#171614 23 · 22 · 20

Dark-mode surfaces

Border

#D4D1CA 212 · 209 · 202

Dividers, card edges

Amber is the only accent. Charcoal on Comb White clears 15.1:1; white on Ink clears 13.4:1 — both well past WCAG AA. Amber on Comb White is 2.6:1 — never use it for body text. Amber is for shapes, rules and large display type only.

Wordmark and brand type

GARZAHIVE

Outfit SemiBold · all caps · +170 tracking · set as one word, never “Garza Hive”

WORDMARK RULES

Always one word, capitalised GARZAHIVE, in the lockup.

In running prose write GarzaHive — camel case, no space.

Tracking is fixed at +170. Do not re-space by hand.

Never substitute a different typeface for the wordmark; use the supplied outlined vector.

The wordmark may be used alone where the icon is already present nearby, e.g. a footer under an app icon.

SUPPORTING TYPE

Backgrounds

Comb White
Primary lockup

Ink
Reversed lockup

Hive Amber
Single-colour charcoal only

Deep Teal
Reversed lockup

SAFE PLACEMENT

Prefer flat backgrounds. On photography, place the reversed lockup over an area of even tone, or set a charcoal scrim at 60% opacity behind it.

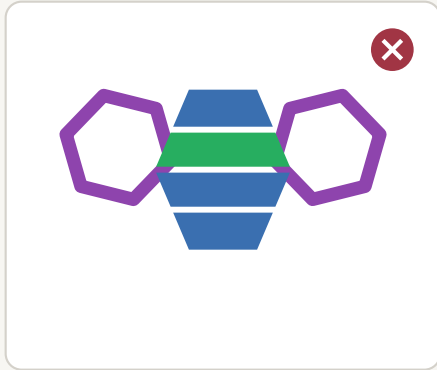

On amber the mark must be single-colour charcoal — the amber band would otherwise disappear into the background.

Contrast between the mark and its background must reach 3:1 at minimum.

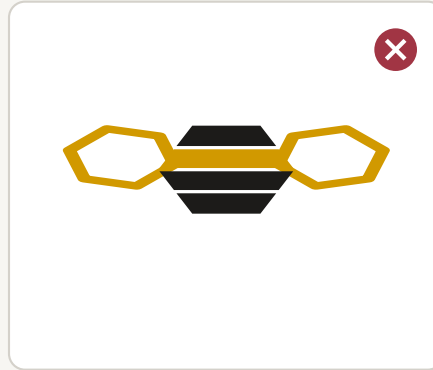

APPLICATION DEFAULTS

App icon / PWA	Icon on Ink, 12% corner radius
Favicon	Mono charcoal icon, 16 & 32 px
GitHub README	Horizontal lockup, reversed variant
Docs site header	Horizontal lockup, 32 px icon height
Terminal / CLI splash	Mono white icon, ASCII fallback
Agent avatars	Never the logo — use per-agent avatars

What not to do

Don't recolour the bands

Don't stretch or squash

Don't rotate the mark

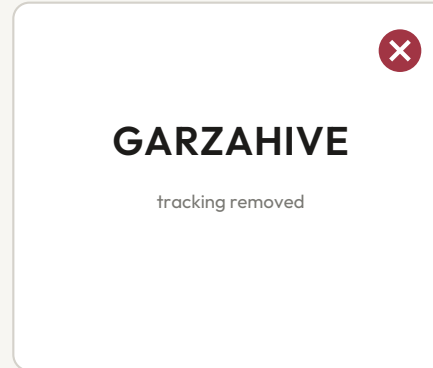

Don't add effects

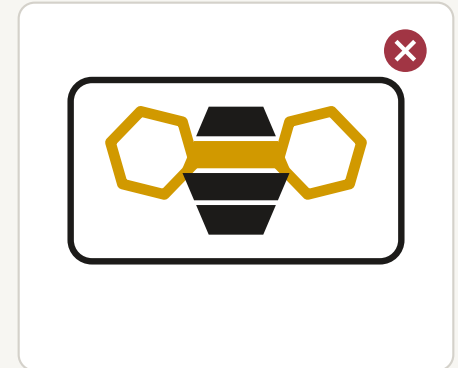

Don't reorder the bands

Don't fill the wings

Don't respace the wordmark

Don't box or outline it

If a placement seems to need one of the above, the placement is wrong — change the layout, not the logo.

Asset index

LOCKUPS

logo-primary-vertical.svg

Default mark. Square and stacked placements.

logo-primary-horizontal.svg

Headers, nav, banners.

logo-reversed-vertical.svg

White body, amber wings — dark grounds.

logo-reversed-horizontal.svg

White body, amber wings — dark grounds.

SINGLE COLOUR

logo-mono-charcoal.svg

One-colour print and engraving.

logo-mono-white.svg

Dark, busy or photographic grounds.

logo-mono-amber.svg

Amber-on-dark accent use only.

ICON & WORDMARK

icon-primary.svg · icon-reversed.svg

App icon, avatar slot, favicon source.

icon-mono-charcoal.svg · icon-mono-white.svg

Small sizes, 24 px and below.

wordmark-charcoal.svg · wordmark-white.svg

Type-only, where the icon appears nearby.

PRODUCTION NOTES

All artwork is generated parametrically from `build_logo.py` — edit the constants at the top of that file to retune the geometry, then regenerate. Every SVG has a transparent background and no clipping mask. The wordmark ships as outlined paths, so no font install is required to render the logo. Outfit (SIL Open Font Licence) is only needed for supporting typography.

Raster exports: render the SVG at the target pixel width rather than upscaling a PNG. For favicons export the mono icon at 16, 32, 48 and 180 px.
